
your dragon

Here I am then. About to be adorned. A Chinese dragon or a four-leaf clover? First the disinfectant. here comes the needle. 100 pricks per second. I grit my teeth. There it is: a pink mermaid! Cool

our colour

Scientists have developed a semi-permanent ink especially for tattoos that's now easier to remove. Special pigments are also used in all sorts of paints and dyes. In your hair, on your fence, on your bike. There's even a car paint that repairs scratches on its own – and in different colours.

Chemistry– Colourful

Chemistry is discovering

In your iPod, your Mars bar, your Nikes. Even in the chemical processes in your body. Chemistry continuously makes discoveries about everything. Don't stand on the sideline. Make it your game.

This campaign is an initiative undertaken by companies in the chemical sector, schools and universities. Like to know more??
