# Chemistry = Survival

immune - sterile - dead mosquito

drain swamp - **REMEDY**

**sick**  
Mosquitoes are everywhere. In the tropics a mosquito bite can be deadly. Malaria is no joke. If you get it, you won't be alone. Millions of people suffer from it. Every day.

**better**  
The malaria parasite quickly becomes resistant and is therefore difficult to control. The chemical and pharmaceutical industries are continuously trying to develop new medicines to prevent and cure malaria. Another area of investigation: the breeding and release of sterile mosquitoes, and making people immune to malaria.

**Chemistry is discovering**  
In your iPod, your Mars bar, your Nikes. Even in the chemical processes in your body. Chemistry continuously makes discoveries about everything. Don't stand on the sideline. Make it your game. This campaign is an initiative undertaken by companies in the chemical sector, schools and universities. Like to know more??
